GENTSACADEMY · SELF-STUDY FIELD GUIDE

Prompt Engineering and Responsible Generative AI

TEC-009 · Week 2 of 8 · IT and Technology

Study independently · keep a notebook · save your evidence

THIS WEEK'S OUTCOME

Evaluate outputs for accuracy and bias.

STUDY RHYTHM

6 hours

Short sessions work best: Read · Watch · Make · Reflect.

START HERE · IN PLAIN LANGUAGE

In plain language, this lesson helps you work on evaluate outputs for accuracy and bias.. Treat foundations and workflow as a skill you can build in small steps: study one idea, compare it with a real Liberian or regional example, and save a short piece of evidence of what you understood.

01 READ
Find the main idea.

02 WATCH
Notice a method.

03 MAKE
Try it locally.

04 REFLECT
Check what changed.

Your learning path

READ FOR THE IDEA
Read for the main idea: Evaluate outputs for accuracy and bias.

WATCH FOR THE METHOD
Watch for one method or example connected to foundations and workflow.

MAKE EVIDENCE
Apply the idea locally and save prompt library and ethics memo.

ESSENTIAL QUESTION

How could foundations and workflow improve a real situation connected to Prompt Engineering and Responsible Generative AI?

Write one sentence before you begin. Revisit it after you apply the activity.

Detailed lesson notes

CONCEPT NOTE

This original lecture note places “Evaluate outputs for accuracy and bias.” inside the wider work of Prompt Engineering and Responsible Generative AI. The week is not only about remembering a definition. It is about understanding the choices behind the work: clear requirements, repeatable workflow, testing, and safe implementation. Begin with a workplace or service process that could be improved with a digital tool, then use the linked academic source to compare your first idea with a more formal explanation.

A useful way to learn this topic is to move from a situation to a decision and then to evidence. First describe what is happening and who needs a better result. Next identify the information, people, tools, or constraints that shape the decision. Finally make a small, responsible attempt and explain what you would improve. This sequence keeps self-study practical and prevents a learner from copying a solution without understanding the reason for it.

01 · PURPOSE

Purpose: connect foundations and workflow to the outcome “Evaluate outputs for accuracy and bias.”.

02 · METHOD

Method: define the user, build a small version, test it with safe sample data, and document the result.

03 · EVIDENCE

Evidence: save a short record that another learner could understand and review.

INSTRUCTIONS · WORK IN ORDER

1. Read the guide and linked source for the main concept; write down two unfamiliar terms.
2. Describe a local or regional example without including private or identifying information.
3. Complete the weekly exercise using safe sample data, a fictional scenario, or your own non-sensitive work.
4. Review your result against the self-check questions and record one improvement for the next session.

WEEKLY EXERCISE

Exercise: Prompt Engineering and Responsible Generative AI learners should define the user, build a small version, test it with safe sample data, and document the result. Use the week’s focus as your test case and save prompt library and ethics memo.

Learn from trusted sources

These materials extend this original GentsAcademy guide. They remain owned by the named providers. Read or watch using the source's own access and licence terms.

ACADEMIC READING · SOURCE RECORD

Introduction to Computer Science and Programming in Python

Provider	MIT OpenCourseWare
Kind	University open course
Licence / access	MIT OpenCourseWare terms
Official URL	Open official source at ocw.mit.edu

Use it this week: Read selectively for this week's foundations and workflow work.

UNIVERSITY OR PROFESSOR VIDEO · SOURCE RECORD

HTML, CSS, JavaScript

Provider	Harvard CS50
Kind	University lecture or official educational video
Licence / access	Access terms apply; video remains the property of its provider and platform.
Official URL	Open official source at youtube.com

Use it this week: Watch with the Prompt Engineering and Responsible Generative AI learning outcome in mind; take notes on an idea to test locally.

Turn study into skill

PRACTICE LABORATORY

Complete a guided foundations and digital workflow activity using a Liberian or regional case study.

Keep your work simple, local, and real. A basic note, recording, checklist, screenshot, calculation, or plan is valid practice.

EVIDENCE CHECKLIST

- ☐ I named the main idea.
- ☐ I noted one example.
- ☐ I tried one small action.
- ☐ I saved prompt library and ethics memo.

SELF-CHECK · BEFORE YOU FINISH

1. What is the main idea in your own words?
2. Which decision or assumption most affects the result?
3. What evidence would show that your approach is useful and responsible?
4. What is one next action I can test or improve?

REFLECT AND CONNECT

In 3–5 sentences, explain how this week's concept could improve a real organisation, community service, workplace, or learner project. Identify one assumption, one risk, and one action you would test next.

Vocabulary + notebook

Use this final page as a learning checkpoint. Clear terms and brief notes make independent study easier to continue.

SMALL SELF-STUDY GLOSSARY

self-directed study (self-study) means you manage your own learning plan. learning evidence (evidence) is the proof you save. A learning source (source) is credited to its original provider.

Glossary reference list

***evidence* – learning evidence**: A saved note, plan, calculation, recording, checklist, or other item that shows what you can do.

***self-study* – self-directed study**: A learner plans, studies, practises, and checks understanding without waiting for a live class.

***source* – learning source**: An external reading or video credited to its original provider.

MY NOTE BANK

The one idea I want to remember:

The example I will look for this week:

FINISH WELL

Choose a time for your next study session. Small regular sessions are more useful than waiting for a perfect long study day.

SHARE SAFELY

Discuss an idea with a trusted peer, mentor, or colleague. Keep your own notes and do not share sensitive personal or workplace data.
